This is to certify that Dr. Kanag Baska and Dr. Meena Baska gave a lecture on the clinical use of third generation supra-glottic device, the BASKA MASK during the clinical meeting of the department of Anaesthesiology on October 9, 2012. Further, they also gave the live demonstration of this device in number of patients in Operation Theater with active interaction amongst the anaesthesiologists.

This clinical lecture cum demonstration lasted for four hours. All the members appreciated the skills and usefulness of this device. It was unanimously felt that this device is far superior to the existing supra-glottic devices in terms of ease of insertion, better toleration of positive pressure ventilation, easy suctioning, its atraumatic placement and ease of removal. This device would certainly be a welcome addition in the airway armamentarium of Khoula Hospital and its ICU.
